

# Ubbink inroof system

With this universal roof mounting system, it is possible to install all kinds of solar panels between the roof tiles. The system is suitable for both renovation and new construction.

The roof mounting system is attached to battens. This roof mounting system can be mounted on sloping roofs with a roof pitch varying from 15° to 70°. The system components are covered by a 10-year product warranty, provided that the system is installed in accordance with the instructions in these installation instructions. With this roof mounting system solar panels can be clamped with a frame height of 30 to 52 mm.
